Gynaecology- Endometriosis

Introduction

The Covid pandemic has had a significant impact on the NHS ability to provide routine elective services. We recognise that patients are waiting longer than we would all like and it is not always possible to identify when treatment will take place. This document provides you with information on how you can support yourself while waiting to attend the hospital.

Endometriosis is a condition where tissue similar to the lining of the womb starts to grow in other places, such as the ovaries and fallopian tubes. It can affect women of any age and is a long-term condition that can have a significant impact on your life, but there are treatments that can help.

Symptoms of endometriosis

The symptoms of endometriosis can vary. Some women are badly affected, while others might not have any noticeable symptoms. The main symptoms of endometriosis are:

- pain in your lower tummy or back (pelvic pain) – usually worse during your period
- period pain that stops you doing your normal activities
- pain during or after sex
- pain when peeing or pooing during your period
- feeling sick, constipation, diarrhoea, or blood in your pee during your period
- difficulty getting pregnant

You may also have heavy periods. You might use lots of pads or tampons, or you may bleed through your clothes. For some women, endometriosis can have a big impact on their life and may sometimes lead to feelings of depression.

Causes of endometriosis

The cause of endometriosis is not known but several theories have been suggested, including:

- genetics – the condition tends to run in families, and affects people of certain ethnic groups more than others
- retrograde menstruation – when some of the womb lining flows up through the fallopian tubes and embeds itself on the organs of the pelvis, rather than leaving the body as a period

My Planned Care Patient Information Platform

- a problem with the immune system, the body's natural defence against illness and infection
- endometrium cells spreading through the body in the bloodstream or lymphatic system, a series of tubes and glands that form part of the immune system

When to see a GP

- See a GP if you have symptoms of endometriosis, especially if they're having a big impact on your life. It may help to write down your symptoms before seeing a doctor. It can be difficult to diagnose endometriosis because the symptoms can vary considerably, and many other conditions can cause similar symptoms.
- A GP will ask about your symptoms and may ask to examine your tummy and vagina. They may recommend treatments if they think you have endometriosis. If these do not help, they might refer you to a specialist called a gynaecologist for some further tests, such as an ultrasound scan or laparoscopy.

Treatments for endometriosis

There is currently no cure for endometriosis, but there are treatments that can help ease the symptoms.

- hormone medicines and contraceptives – including the combined pill, the contraceptive patch, an intrauterine system (IUS), and medicines called gonadotrophin-releasing hormone (GnRH) analogues
- **Surgery can be used to remove or destroy areas of endometriosis tissue, which can help improve symptoms and fertility.**
- **Hysterectomy** is one of the surgical options available to remove the womb to eliminate the organs affected by endometriosis.
- Your doctor will discuss all treatment options with you.

Health and Wellbeing Guidance for Patients - Useful Website links

Whilst you are waiting for any procedure, it is important to maintain a healthy lifestyle and be as medically fit as possible. If you have any long-standing conditions such as high blood pressure you should get this reviewed at your Doctor's surgery to make sure it remains well controlled. This will also help prevent any unnecessary delays when you come for your pre-operative assessment.

My Planned Care Patient Information Platform

- **Living with endometriosis.** Information on a range of **Gynaecological** conditions including **Endometriosis** can be found on the following website:
 - Endometriosis can be a difficult condition to deal with, both physically and emotionally. As well as support from your GP, you may find it helpful to contact a support group, such as **Endometriosis UK**, for information and advice.
