

Gynaecology Department - Hysteroscopy

Introduction

Unfortunately we are still experiencing some disruption within our teams and may have to reschedule appointments from time to time. We really appreciate your patience if you are affected by this.

The following information will support you while you are waiting to attend the hospital.

Guidance for Patients

You may have been to see your GP due to your periods being longer or heavier than usual or bleeding in between your periods. They advised that they were going to refer you to the Gynaecology department at the hospital.

The diagnostic procedure for symptoms such as these is called a hysteroscopy and is usually performed in a clinic setting using a local anaesthetic. It is a procedure that allows the doctor to look inside the womb (uterus), using a narrow tube-like instrument called a hysteroscope. An operative hysteroscopy can also be used to remove polyps, fibroids and adhesions.

If you are experiencing a delay in receiving your appointment then please see your GP as they may be able to prescribe some medication to control your menstrual flow or other symptoms you may be having while you wait to see the gynaecology specialists.

Please be assured we are doing our utmost to schedule your appointment as soon as possible. Until you have received your appointment you will stay under the care of your GP.

If you no longer require your appointment please let us know as soon as possible as that will allow us time to offer an earlier appointment to another patient. If you do not have the phone number for the specialty you will be reviewed in but would like to cancel, change your appointment or speak to a staff member please call our switchboard number and they will be able to direct your call to the correct specialty.

George Eliot Hospital Switchboard – 02476 351351

Outpatient Appointments – 02476 865050 (Call Centre)

Please note that the Outpatients Call Centre current opening times are as follows:
